Index

Absolute Risk Aversion (ARA), 15
Accounting, 10, 58, 123, 349, 455
Accrued interest, 431, 433, 436
Active acceptance of risk, 22
Actuarial price, 5
Advanced IRR hedging, 475
duration vectors, 477–480
hedging with fixed income derivatives, 480–482
M-Absolute and M-Squared models, 475–477
Adverse selection, 38
Aggregation, 19, 530
All-or-nothing, 333
Alternative risk transfer (ART), 489
insurance derivatives, 501–504
market, 496–498
primary contracts, 498–501
Altman z-score model, 307–308
American Accounting Association (AAA), 374
American Institute of Certified Public Accountants (AICPA), 374
American option
analytic approximation to prices, 249–251
binomial tree, 198–202, 209, 458
early exercise, 403
future options compared to spot options, 262
Monte Carlo simulation and, 231–233
non-standard, 82
option on dividend paying stock, 209, 458
option on non-dividend paying stock, 191
put-call relationship, 191
Amortizing period, 420
Amount of stable funding (ASF), 358
Analytic approximations, 247–249
to prices, 249–251
Analytical tools, 95
Approximation methods, 65
Arbitrage opportunity, 175
Arbitrage Pricing Theory, 62
Arbitrage theory, 23–25
Arbitrage trading, 175
Arbitrageurs, 172, 174
Arithmetic returns, 219–220, 230
Arrow-Pratt coefficient of absolute risk aversion, 10
Ask price, 166, 335, 337, 339–341, 351, 507
Asked price, 364
Assessments, 381
Asset return volatility, 406
Asset swaps, 430–434
Asset-Backed Securities (ABS), 443
Asymmetry of information, 37
Asymptotic normality, 70
ATP estimation, 62
Autocorrelation (see also Correlation), 79
absence of, 91
coefficient of time series, 88
of financial returns, 87–91
of returns, 91
of squared returns, 92
Autoregressive conditional heteroscedasticity model (ARCH model), 83–87
ARCH variance, 66
Average rate of trading, 345
Average strike call, 486
Average strike put, 486
Axiomatic approach, 245
Back testing, 109, 123, 140–142, 249
Backward induction, 112
Backward PDE, 407
Balance sheet, 19–20
Bank funding structure, 523
Bank liquidity management, 531
Bank of America, 188
Bank regulation, 530
Bank risk, 522–524
Banking sector, 515, 522
areas of future improvements, 528–531
bank risk and business models, 522–524
risk management systems, 524
Banks, 448
Banks business model, 523
Basel Accord, 2, 110, 224
Basel committee, 530–531
Basel II approach, 393–396
Basel III framework, 359
Basic Indicator Approach (BIA), 393–394
Basic stylized facts, 506–508
Basis Point Value method (BPV method), 285–286
Basis risk, 283
hedging and, 283
Basket option, 348, 533–534
Bayesian probability models, 111
BEKK model, 160
Bermudan-style options, 534
Bermudan-style receiver swaption, 433
Bermoulli default variables, 473
Bermoulli utility functions, 10
Bermoulli variable, 29–30, 100–101
Beta, 246
of asset, 54
risk measure, 55
Bid-ask spread, 166–167, 173, 332, 335–336
bouncing of prices, 167
Big data
and risk, 538–539
vendors, 504
Binary random vector, 131
Binomial distribution, 100–103, 140–141, 249
characteristic function of, 107
Binomial mass function, 106
Binomial model in discrete time, 172
Binomial trees, 198–202, 209, 458
Bivariate normal distribution, 33, 125
Bivariate survival function of random vector, 130
Black holes, liquidity, 343–344
Black Model, 187–189
Black-76 model, 186
Black–Scholes model, 26

Short call, 176
Short hedge, 486
Short position, 173, 175–176, 180, 208, 284, 343, 412, 445, 461
Short put, 177
Short rate models, 272
multi-factor models, 280–282
single-factor models, 276–280
term structure of interest rates, 272–275
Short selling, 46
Short strangle, 182
Short term risk free rate (see Short rate models)
Sigma (see Vega)
Simulations, 113–115, 286, 529
Single-factor models, 276–280
Skeweness, 93
Sklar’s theorem, 124
Slope of CML, 56
Small Capitalization stocks, 61
Small firm effect, 28
Small minus big capitalization stocks (SMB capitalization stocks), 61
Sophisticated corporate treasuries, 404
Sovereign credit risk, 535
Sovereign risk dynamics, 535–537
Spearman’s rho, 128–129
Special purpose vehicle (SPV), 442, 444–445
model of, 453–454
Specialized analytics, 381
Specific risk, 11
Speculation, 173–174
Speculators, 173–174
Spot price, 178–180, 186, 338
Spot rate, 164, 203, 262, 266, 400, 486
Spot volatility approach, 188
Spread option, 533
Spread transaction, 166, 507
Squared returns, autocorrelation of, 92
Stable funding, 358
Standard & Poor’s 496 (S&P 496), 54
Standard delta-normal approach, 150
Standard Delta-VaR methods, 490
Standard deviation, 40, 168
Standard duration, 476
Standard GARCH models, 167, 508
Standard normal distribution, 77–78
Standardized Method (SM), 302
Static risk-management processes, 370
Static simulations, 286
Trial-and-error approach, 261
Two-factor Hull-White model, 282

Unbiased estimator, 70
Uncertainty, 2–5, 18
Underlying variable, 194–195
Unencumbered assets, 361
Unsystematic risk (see Specific risk)
Upper boundary for VaR, 224
Upper tail dependence, coefficient of, 129–130
US Treasury Department, 429–430
Utility function of investor, 4–5
Utility functions, common forms of, 15

Value at risk (VaR) (see also Interest rate risk (IRR)), 12, 123, 140, 154, 217, 220–224, 241, 246, 302
analytic approximations, 247–249
back testing, 123, 140–142
calculation methods, 228–234
choice of parameters for, 227
CVaR, 145–147, 156–158
decomposition, 241–245
ES, 154–156
expected shortfall, 143–145
factor mapping for, 238–239, 255–256
features, 241
limitations, 245–247
model back testing, 249–251
for portfolios of derivatives, 150–151
rationale and definition, 224–226
stress testing, 251–253
testing, 249
VaR-looking models, 526
VaR advances, 489–490
historical simulation revisiting, 493–495
modified Delta VaR, 490–493
modified Monte-Carlo and scenario analysis, 495–496
Variable trigger, 501
Variance
of binomial distribution, 102
decomposition of returns, 59
of HARCH(2) process, 168
of portfolio, 43–44
of random variable, 66
rate, 203

Variance swaps, 410–413
Variance-covariance matrix, 46
Vasicek model, 276–278
VEC model, 159–160
Vega, 191
hedging, 210–212, 458–460
Volatility, 62
asset return, 406
clustered, 91
financial, 63
heterogeneous, 167–169, 508–510
historical, 63
implied, 63–65, 406–407
parameter, 65
smile patterns, 411
strategy with strangles, 182
surface, 406–407
swap, 412
types, 63–66
Volatility risk, 387, 405
callable bonds, 407–410
implied volatility, 406–407
variance swaps, 410–413

Weak-form efficiency, 26
Weekend effects, 92
Weibull distribution, 135
Weighted spread approach, 352
Wiener process, 29
Worst-case-scenario (WCS), 496

Yield curve, 273
risk, 283
Yield shifts, 267–272
Yields, 258–263
Zero curve, 187–188
Zero rate, 188
Zero-coupon bond, 260, 270–271, 274–275, 300, 320
Zero-coupon rate, 266, 476
Zero-coupon yields, 273, 482
Zero-volatility spread, 434
Zipf’s law, 513
