Information Pollution as Social Harm

Investigating The Digital Drift of Medical Misinformation in a Time of Crisis

Anita Lavorgna
INFORMATION POLLUTION
AS SOCIAL HARM
Over the past two decades, digital technologies have come to permeate ever more aspects of contemporary life. This trend looks to continue and has profound implications for the social sciences, particularly criminology, with technology-facilitated offences now arguably constituting the most dynamic and rapidly growing area of contemporary crime. Despite this development, the discipline of criminology has been slow to embrace the critical study of technology-facilitated offences and social harms, with most research conducted in this area still informed by a relatively narrow range of cybersecurity and applied criminological perspectives.

Emerald Studies in Digital Crime, Technology and Social Harms is part of a new movement within criminology and related disciplines to broaden this narrow focus and engage critically with new trends in technology-facilitated offending and victimisation. The book series uses a combination of critical criminological, socio-legal, and sociological perspectives to consider a wide range of technology-facilitated offences and harmful social practices, ranging from digital surveillance, cyberbullying and image-based sexual abuse through to global darknet drug trading.
