

Index

- Accounting, 86–90
 - manipulation, 81
- Adaptive capabilities, 5–6
- Adaptive learning process, 102
- Adaptive planning, 111
- Adaptive processes, 102–105
- Adaptive responses, 104
- Advanced Tissue Sciences Inc., 130
- Alternative simulations, 149–150
- Altman's Z^2 (ALT Z), 83
- American credit rating, 16
- Amerityre Corporation, 131
- Ancor Communications Inc., 133
- Ariel Corp., 133–134
- Armano Foods Distinction, 137
- Autonomous investments (AUT), 86, 112
- Average lifespan, 31

- Background and prior studies, 66
 - theoretical underpinnings, 68–76
- Bankruptcy risk, 83
- Behavioral theory of firm, 69, 98
- Bioject Medical Technologies, 134–135
- Bloomberg records, 25
- Bowman paradox, 4, 67, 69, 90, 98, 122, 143, 152

- C-phone Corp, 133
- Capital asset pricing model (CAPM), 4, 67, 72, 147
- Cardiodynamics International Corp., 135–136
- Cardiovascular system (CVS), 138
- Cash flow returns (CFRE), 39, 82, 85, 92
- Cash holdings (CASH), 86
- Central nervous system (CNS), 138
- CEO tenure, 6

- ChromaDex Corporation, 130
- Climate change, 2
- “Closest fit” technique (CF technique), 23
- Coefficient of variation, 90
- Collaborative approaches, 8
- Complete case approach, 21–22, 35, 38, 48–49
- Compustat, 25
 - databases, 16
 - North American Fundamental Annuals database, 16
- Computational analyses, 106–107
- Computational model, 100–102
- Computational simulations, 5
- Contemporary business activities, 2
 - general background, 4–6
 - methodological approach, 6–8
 - negative and positive outliers, 3
 - relationship between performance and risk, 5
- Contemporary firms, 2, 120
- Conventional planning-based control approaches, 8
- Corporate investment decisions, 68
- Corporate performance, 98

- Data analyzing, 147–149
- Data cleaning process, 18–21
 - complete case approach, 21–22
 - dataset construction, 17–18
 - industry classification systems, 19
 - KNN approach, 23–24
 - missing values in original datasets, 20
 - multiple imputation approach, 22–23
 - smooth imputation, 24–26
- Data outliers, 38–39

- Data sampling, 144–145
- Dataset construction, 17–18
- DiaSys Diagnostic Systems, 134
- Disc, Inc., 132–133
- Discounted cash flow (DCF), 68
- Disruptive events, 99
- Distributions, 48–53
 - characteristics, 34–38
 - patterns, 83
- Dynamic capabilities, 70–71, 98–99
- Dynamic complex systems, 7

- Economic conditions, effects of, 92–93
- Effective strategic responsiveness, 71
- Empirical analyses, 5
- Empirical data studies, 3
- Empirical regularities, 3
- Empirical studies, 67
- Empirical validation, 112–113
- Ethical conduct, 6
- European data, 16
- European datasets, 16, 20, 61
- European Economic Area (EEA), 16
- European firms, 16
- Executive overconfidence, 88–89
- Exploratory simulation studies, 143
- Extended data analysis, 48
 - normality criteria, 56–64
 - original European and North American data with complete dataset, 50–51
 - outliers and distributions, 48–53
 - persistence of outliers, 53–56
 - ROA distributions, 52
- Extreme disaster-like losses, 66
- Extreme events, 6
- Extreme outcomes, 120
- Extreme outliers, 38, 40–41
- Extreme values, 52
- Extreme weather events, 2

- Fences, 38
- Finance scholars, 68
- Finance studies, 67, 72–76

- Finance theory, 67
- Financial crisis, 92
- Financial research agency, 16
- Financial returns, 66
 - analysis, 120–123
- Fine-grained analyses, 39–42
- Firms, 31, 98, 101
 - firm-specific traits, 74
 - performance, 5
 - returns, 74
- Flexibility, 90, 142
- Forensic techniques, 123
- Formal planning, 8
- Framing logic, 7
- Frequency diagrams, 48

- Gaussian distribution, 72
- Gaussian normality features, 3
- Gaussian statistical methods, 72
- Gaussian statistics, 120
- Geopolitical tensions, 2
- Global financial crisis, 2
- Good management, 70
- Graco Inc., 136–137

- High excess kurtosis, 144
- Humbleness, 6

- Idiosyncratic organizational risks, 68
- Imputation methods, 18
- Imputation treatments on geographical dataset, 44–45
- Industry-related effects, 90–92
- Inner fences, 38
- Innovation Gaming Group, 136
- Interactive controls, 103
- Interactive strategy-making approach, 5
- Interactive updating, 111–112
- Inverse risk-return characteristics, 3
- Inverse risk-return relationships, 69, 144
- Investment analysis, 38
- Italiaonline s.p.a., 25

- k* closest observations, 24
- K-nearest neighbor approach (KNN approach), 23–24, 35, 144
- k*-number (*k*), 24
- Kurtosis, 34–35, 57, 85
 - of ROA distribution, 36–37
- Leadership
 - effects, 86–90
 - traits, 148
- Learning, 149
- Left-skewed performance distributions, 142
- Left-skewed returns, 127
- Leptokurtic distribution, 127
- Linear regression analysis, 3
- Lotus Pharmaceuticals Inc., 138

- Management scholars, 68
- Management studies, 66–69
- Managing risk events, 120
- Maneuverability, 86
- Manhattan distance, 23
- Market-based returns, 73
- Mathematical derivations, 5
- Military conflict, 2
- Missing values, 18
- Missing-completely-at-random (MCAR), 21–22
- Multiple imputation approach, 22–23
- Multiple Imputation Chained Equation (MICE), 21–22, 144
 - imputation methodology, 35

- Negative outliers, 123
- Negative risk-return phenomenon, 67
- Negative risk-return relationships, 70, 74, 98, 142
- Negative skew in stock returns, 73
- Negatively skewed distributions, 70
- Net income, 83
- Nicotinamide adenine dinucleotide (NAD+), 130
- Nicotinamide riboside (NR), 130
- Non-insurable incidents, 2
- Normal distribution, 57
- Normality assumption, 57
- Normality criteria, 56–64
- North American databases, 16
- North American dataset, 20, 62–63

- Openness, 142
- Operating activities net cash flows (OANCF), 82, 85, 92
- Operating margin (OPM), 39, 42
- Optimism, 6
- Ordinary least-square regressions, 70
- Organization for Economic and Co-operation and Development (OECD), 17
- Organization studies, 8
- Organizational ability, 2
- Organizational adaptation processes, 4–5
- Organizational learning, 107
- Organizational studies, 66
- Organizations, 2
- Outer fences, 38
- Outliers, 38, 40–41, 48–53, 119
 - analyzing, 150–151
 - financial return analysis, 120–123
 - identifying, 123–127
 - return outcomes and risk correlations of manufacturing firms, 122
- Overconfidence (OVER), 6, 70, 88, 112
- Overconfident executives, 87

- Pandemic, 2
- Path-dependent random walk, 102
- Performance distributions of firms, 66
- Performance function, 101
- Performance measures, 17
 - for European and North American Datasets, 27–28
- Performance outcomes, 2

- Persistence of outliers, 53–56
- Platykurtic frequency distribution, 86
- Point of Care Nano-Technology Inc. (PCNT), 25
- Positive outliers, 126
- Positively skewed distribution, 73
- Predictive mean matching (PMM), 23
- Preliminary data analysis, 30
 - data outliers, 38–39
 - distribution characteristics, 34–38
 - findings, 42–43
 - fine-grained analyses, 39–42
 - missing values, 30–31
 - number of firms and lifespans, 31–34
- Price volatility of individual stocks, 73
- Prospect theory, 69, 98
- Quartile approach, 48
- Randomness, 71
- Rapid environmental changes, 142
- Relative ratio, 67
- Resilience, 7
 - to complexity, 7–8
- Resilient organizations, 7
- Response capabilities, 10, 127
- Response models, 4
- Responsiveness model, 109–110
- Return on assets (ROA), 22, 30, 67, 82
 - needed decrease in share of observations and companies per industry to make ROA distribution normal, 60
 - outliers in North American and European datasets across different company sizes, 58–59
- Risk behavior, 6
- Risk propensity, 5
- Risk-neutral return distributions, 73–74
- Risk-return effects, 71
- Risk-return relationships, 70
- Securities and Exchange Commission Office (SEC), 17–18
- Semiautomated approaches, 3
- Size effects, 48
- Skewness, 34–35, 57
 - of ROA distribution, 36–37
- Smooth imputation, 24–26
- Soligen Technologies, 132
- SQI Diagnostics, 129
- Standard & Poor (S&P), 16
- Standard Industrial Classification (SIC), 17
- Static stochastic process, 102
- Stationary stochastic process, 101
- Statistical measure kurtosis, 48
- Statistical skewness measure, 48
- Stock beta, 73
- Stock price, 67
 - developments, 73
- Strategic adaptation, 5, 98, 142
 - general background, 98–99
 - strategic responsiveness, 99–113
- Strategic fit, 100
- Strategic response capabilities, 70
- Strategic responsiveness, 99
 - adaptive processes, 102–105
 - computational analyses, 106–107
 - computational model, 100–102
 - effects of major disruptions, 107–111
 - empirical validation, 112–113
- Strategic threats, 68
- Subsamples, 86
 - accounting and leadership effects, 86–90
 - accounting and leadership statistics for firms above and below median ROA, 89
 - analyzing data, 83–86
 - descriptive statistics on key performance variables for manufacturing firms, 85

- effects of economic conditions, 92–93
- frequency diagrams of net income, total assets, and ROA, 84
- industry-related effects, 90–92
- statistics for firms performing above and below median ROA, 89
- statistics on leadership and accounting variables for manufacturing firms, 88
- Sunrise Technology, 129–130
- Sustainable competitive advantage, 2
- Systematic risk, 67
- Theoretical foundations, 145–147
- Time-periods, 5
- Tobin's q (TQ), 17, 82, 85, 148–149
- Trace plots, 23
- United Energy Corporation (UEC), 131
- United-Guardian, 138
- Unsystematic risk, 67–68
- Vidamed Inc., 135
- Vitreous Glass, 139
- Waterfurnace renewable energy, 140
- WD-40, 139
- Wicked problems, 8
- WinsORIZATION, 57, 150
