INDEX

Advanced-Repair-To-Order-Disassembly-To-Order (ARTODTO) system, 7–18
Aetna, 94
Aflac, Inc. (AFL), 98–105
AMPL programming language, 68, 72, 77
Analytic Hierarchy Process (AHP), 4, 151–152
Anthem WLP, 94
Asymmetric traveling salesman problems (ATSPs), 23

Balisle, Phillip M., 148
Benchmarking, 94, 96, 99, 105, 173–174
Bounded rationality, 150

Canceling navy ship maintenance availabilities, readiness decision model for, 147–162, 164–166
Capacitated vehicle routing problem (CVRP), 61
Chebyshev goal programming, 112
CIGNA CI, 94
CO_2 emission minimization, 34–35, 37–38, 40–42, 48–51, 58, 61, 62, 65, 66
Coating systems, 154–155
Combined Intelligent Products (CIPs), 6
Competing supply chain, 170
Computation processor units (CPUs), 23, 33
Conflicting supply chain, 170
Congestion, 60
Constant Returns to Scale (CRS), 97, 98
Contractor selection, 151
Credit Unions, 95
Current ship readiness, 149–152, 157, 161, 162

Data envelopment analysis (DEA), 95–99, 106, 107
DDG 51-class destroyers, 148, 149, 152, 156, 157, 160–161, 164, 166
Decision-making, 147–162, 164–166
Decision making units (DMUs), 96–98, 101, 102
Delivered pellets maximization, 35–42, 46–49
Demand maximization, 74–76
Disposal weight, 13

Economic crisis of, 2008–2009, 93–94
Efficiency, 95–107
Empty kilometers, 60
End-Of-Life (EOL) products, 4–7, 10, 11, 13–15, 17

Environmental aspects of transportation, 34–35, 37–38, 40–42, 48–51, 58, 61, 62, 65, 66
Eroski case study, 29–32
Expanded Ship Work Breakdown Structure (ESWBS), 153, 155, 166

Fair-minded retailer, 174–178, 180–185
Fair-minded supplier, 178–185
Fairness concern
  supply chain, using option contracts, coordinating, 167–186
Financial performance index (FPI), 95
Fleet mix, 60
Fleet size, 60
Folding carton, 131–145
Freight transportation, 59–61

Goal programming (GP), 4, 5, 10–14
  Chebyshev, 112
  meta-, 87–92
  weighted, 111–112
Government Accountability Office, 148
Gravure printing, 132
Green freight corridors, 61
Green manufacturing, 110
Green vehicle routing problems (G-VRP), 57–79
  multi-criteria, 57–79

Hard constraints of multi-objective problems, 111
Harmonious supply chain, 170
House Armed Services Committee (HASC), 149
Humana, 94

Incompatible supply chain, 170
Integer programming (IP), 131–145

Life cycle readiness, 149–152, 157, 158, 161, 164
Life insurance companies, 98–106
Lincoln National Corporation (LNC), 98–106
Linear Physical Programming (LPP), 4

Mandatory maintenance, 153–155
Material value, 12–13
Medicaid, 94
Meta-goal programming, 87–92
MetLife, Inc. (MET), 94, 98–106
Mixed integer programming, 68, 76
Modernization in ship maintenance, 157–158
  backlog, 158
Multi-attribute utility theory (MAUT), 151, 152, 159, 161–162
Multi-Criteria Decision-Making (MCDM) model, 4–5, 150–153, 155, 159
Multi-criteria green vehicle routing problems, 57–79
  demand maximization versus altitude minimization, 75–76
  demand maximization versus total distance minimization, 74–75
  input data, 66–67
  mathematical models, 68–72

Multi-criteria optimization, for components selection from EOL products, 3–18
Multi-depot vehicle routing problem (MDVRP), 61
Multi-objective optimization
  classification of, 24
  for traveling salesman and transportation problems with environmental aspects, 21–51
Multiple objectives, 109–127
  hard constraints, 111
  soft constraints, 111
Multiple quality characteristics, 109–127
Multiple traveling salesman problem (mTSP), 23

Newsvendor model, 169
Non Decreasing Returns to Scale (NDRS), 97
Non Increasing Returns to Scale (NIRS), 97
Non-mandatory maintenance, 155–156

Offset printing, 132
Open vehicle routing problem (OVRP), 61
Option contracts
  supply chain with fairness concerns using, coordinating, 167–186
Overachievement, 111

Pareto front, 23, 58
Pareto-optimal solutions, 112
Payload, 60
Preemptive goals, 121
Primerica, Inc. (PRI), 98–104
Principal Financial Group, Inc. (PFG), 98–106
Printing plate layout, 131–145
Prioritization, 110, 113, 122, 127
Process mean, 113, 118, 121–123
Process standard deviation, 113, 121–123
Product diversification and firm performance, relationship between, 96
Protective Life Corporation (PL), 98–106
Prudential Financial, Inc. (PRU), 98–106

Quality level, 12

Rational retailer, 178–179
Rational supplier, 174–178
Retailer
  fair-minded, 174–178, 180–185
  rational, 178–179
Reverse supply chain (RSC), 4
RFID (Radio Frequency Identification) tags, 5–7, 14
Road gradient, 60
Road transportation, 22
Rowden, Tom, 149, 150

Satisficing solutions, 111, 122, 150
Sensor-embedded products (SEP), 5, 6
Sensors, 5–7, 14
Ship maintenance decision model
  attributes of, 152–153
  maintenance backlog, 158
  mandatory maintenance, 153–155

missing impact − maintenance, 156−157
missing impact − modernization, 157−158
non-mandatory maintenance, 155−156
Site-dependent vehicle routing problem (SDVRP), 61
Soft constraints of multi-objective problems, 111
Spanish company of groceries
history of, 62−63
international Connections in 2000s, 64
mission of, 64−65
national expansion in 1990s, 63−64
policy of, 65
Speed of transportation, 60
Stackelberg leader, 169
Stancorp Financial Group, Inc. (SFG), 98−106
Stock keeping unit (SKU), 132−152, 142, 144
Supplier
fair-minded, 178−185
rational, 174−178
Supply chain
with fairness concerns using option contracts, coordinating, 167−186
reverse supply chain, 4
types of, 170
vendor selection, 88
Surface Maintenance Engineering Planning Program (SURFMEPP), 148
Symmetric traveling salesman problems (STSPs), 23
Symmetry, 136, 138−140

Tochmark Corporation (TMK), 98−105, 107
Total cost (TC), 11−12
Total disassembly cost (TDC), 11−12
Total distance minimization, 34−40, 46−48, 69, 75−76
Total outside procurement cost (TOPC), 12
Total production cost minimization, 110
Total recycling cost (TRC), 12
Total repair cost (TRPC), 12
Transportation problem, 27−29
CO_2 emission minimization, 35−37, 40−42, 48−49
delivered pellets maximization, 35−42, 46−49
total distance minimization, 35−36, 38−40, 46−48
Traveling salesman problems (TSPs), 23, 25−26, 33, 42−46, 73−74, 77
asymmetric, 23
CO_2 emission minimization, 34−35, 37−38
multiple, 23
symmetric, 23
total distance minimization, 34−35, 37−38, 69
Tricare, 94

Underachievement, 111
Unum Group (UNM), 98−106
US Navy, 147−162, 164−166
Utility theory, multi-attribute. *See* Multi-attribute utility theory (MAUT)

Variable Returns to Scale (VRS), 97–99
Vehicle routing problems (VRPs), 23, 61–62
  capacitated, 61
  defined, 61
  examples, 62
  multi-criteria green, 57–79
  multi-depot, 61
  open, 61
  site-dependent, 61
Vehicle routing problem with time window (VRPTW), 61
Vendor selection, 88

War on terrorism, 148
Weighted goal programming, 111–112
