Adaptive Lasso, 116–117
Advanced Central bank interventions, 368–369
Aggregate, 121
uncertainty, 90
Agnostic shocks, 330, 336–338
Agnostic structural disturbances (ASDs), 336
Agriculture, 10
Alternative frequentist model averaging approaches, 264
American Statistical Association (ASA), 101
Approximate Bayesian Computation approach, 348n4
Approximate bias, 185
Asymmetric Laplace densities (ALD), 114
Augmentation strategy, 340
Autoregressive density (AR density), 123
Autoregressive distributed lag model (ARDL model), 391
Autoregressive processes, 226
Average daily temperature (AVG), 10
Average forecast accuracy, 144–148, 152–154
Average-type test, 180
Bank of England, 354
Bank of Japan, 354
Bates-Granger approach, 91
Bayes factor, 332
Bayesian approach, 94
Bayesian estimation, 332
for VAR models, 134–135
Bayesian framework, 348n4
Bayesian Lasso, 116
Bayesian MIDAS quantile regression, 3
methodology, 112
Bayesian model averaging (BMA), 261
Bayesian model fit, 332
Bayesian quantile regression (BQR), 112, 114–115
Bayesian MIDAS quantile regression, 113
density nowcasts, 120
estimation, 119
global-local shrinkage priors, 117–119
likelihood and conditional posteriors, 115
methods, 3
MIDAS quantile regression, 113–114
mixture normal prior, 119
nowcasting Euro area GDP growth, 122–129
parameter-specific shrinkage priors, 116–117
real-time data, 121–122
shrinkage priors, 115–116
Bayesian VAR (BVAR), 3, 134, 139–140
Behavioral model weight statistic, 265
Bias, 228–230
conditional, 239–248
Big data, 112, 129
Block matrix, 311–312
Blue Chip forecasts, 103–104
Break points estimation, 180
Business cycle synchronization, 278
Caixa Economica Federal, 1
Ceteris paribus, 90
Chicago Merchantile Exchange (CME), 16
China, 304
China Industrial Productivity (CIP), 315
Cholesky decomposition, 284–285
Classic ANOVA method, 98
Classic theory, 388
Climate change, 10
CMR model, 333–334, 339
Cobb-Douglas panel production function, 307
Combined estimator, structural breaks model and, 181–184
Common factors, 281–282
Conditional bias, 226, 239–248
Conditional forecast(ing), 171, 228
bias and MSE, 228–230
forecast error decomposition, 230–231
simulation-based estimators, 231–232
unknown break dates, 232–233
Conditional MSE, 235–239
Congressional Budget Office (CBO), 103
Constant parameters, 227
Consumer Confidence Indicator (CONS), 121
Cornwell, Schmidt, and Sickles model (CSS model), 314
Country-specific QE effectiveness, 373
Dollar factor, 377–378
GVAR model, 373–375
QE interventions contains real effects, 378–380
spillover effects from country-specific long-term interest rate changes, 375–377
world interest rate factor and loadings, 375
COVID-19, 354
announcements, 354, 356–357
bond yield and exchange rate impacts, 365–366
crisis, 377
emerging market interventions, 369–371
Fed interventions, 367–368
financial market impact of COVID-19 QE announcements, 364
other advanced Central bank interventions, 368–369
pandemic, 127–129, 387
QE, 360
robustness, 371–373
Cross-section dependence, 391
CSS model with time-varying fixed effects (CSSW), 316
CSS model with time-varying random effects (CSSG), 316
Cumulative ranked probability score (CRPS), 123
Data generating process (DGP), 162–163, 205, 259
Debt-management, 387
Debt–GDP ratio, 388–389, 396
threshold, 388
Decomposition method, 306
Dense data environments, 116
Density forecasting, 141–143 (see also Conditional forecast(ing))
Density forecasts, 152. (see also Point forecasts)
average forecast accuracy, 152–154
forecast accuracy for individual series, 154
tests for equal predictive accuracy, 154–156
Density nowcasts, 120
Diagonal blocks, 312
Dimension reduction techniques, 134, 137
BVAR, 139–140
factor augmented VAR, 137
LASSO, 139
partial least squares, 137–138
random compression, 138
random projection, 138
random subset regression, 139
Direct forecasts, 140
Dirichlet-Laplace (DL), 116

Philadelphia, 11–16
seasonality, 19
sequential and joint regression results for Philadelphia, 23–28
serial correlation, 19
trend, 17–19
US Unconventional Monetary Policy Spillovers, 373–380
US–Sino decoupling analysis, 307
data, 315–316
direct and indirect effect of input factors, 319–320
empirical results, 316
estimation, 314–315
estimations of production functions, 316–319
GVC, 306–307
heterogeneous technical progress in Solow residual, 307–308
intermediate product share in gross export between United States and China, 305
model, 307
productivity growth of industries and spillovers, 320–322
sector-level analysis of productivity growth, 306
simulation in global value chain, 322–324
spatial interdependence and technology spillovers, 308–309
spillovers of technology through factor input and technical change, 309–311
spillovers within country and across border, 311–314
US–Sino trade, 304
Variable-lag space FAVAR model, 152
VECM model, 332
Vector autoregressions (VARs), 3, 134, 330–331, 336
Vector error correction (VEC), 226
Volatility, 10
War debt, 390
Wilson-Hilferty cube root transformation, 99
Window length selection, 233
conditional bias, 239–248
conditional MSE, 235–239
results, 235
simulation design, 233–235
World Input–Output tables, 306
World interest rate, 386–387, 394
WORLD KLEMS database, 315
Yield curve, 249
