

INDEX

Note: Page numbers followed by "n" indicate notes.

- Acceleration cycle, 136–137
- Akaike Information Criterion, 83
- ARCH-type conditional
 - heteroskedasticity, 11
- Asset
 - pricing models, 88
 - types, 154
- Autocovariance function, 108
- Autoregressive models, 2
- Average pair-wise directional
 - connectedness, 54
- Bank of England (BoE),
 - 148–149, 173
- Bayesian approach, 2
- Bayesian semi-parametric
 - methodology, 41
- Beauty contest assessment criteria,
 - 111–115
- 'Beggart-hy-neighbour' effects, 40
- Beveridge–Nelson filter (BN filter),
 - 47, 101, 137–138
- Bivariate model for GDE–GDI
 - measures, 24
- Bivariate VAR, 97
- Bry and Boschan quarterly dating
 - algorithm (BBQ dating algorithm), 101, 112–113
- Bureau of Economic Analysis (BEA), 3
- Business cycle (BC), 79–90, 100
 - actual cycles comparison, 118
 - beauty contest assessment criteria,
 - 111–115
 - calculation, 101–102
 - cyclical convergence, 102–103
 - defining, 133
 - gross domestic product, 118–122
 - mathematics of Ten TCD methods,
 - 135–144
 - MC simulation, 103–106, 115–118
 - methods used for TCD, 106–111
 - power transfer functions, 134
 - results and assessment, 115
 - synchronization of cycles with
 - Euro Area, 125–128
 - TCD methods, 100–101
 - unemployment rates, 122–125
- Butterworth–Whittaker filter (BWF), 100
- Calibrated parameters, 160–161
- Carter and Kohn's algorithm, 72
- Changing inflation targets, 177
- Chi-squared distributed variables, 24
- Christiano–Fitzgerald filter (CF filter)
 - 101, 138–140
- Classical cycle, 136
- Coherence, 115, 125
- Commodity price inflation, 54
- Comovement
 - decomposing, 172–174
 - external validation, 177–179
 - forces driving, 174–177
 - policy implication, 179
 - understanding, 172
- 'Complementary' spillover
 - effects, 40
- Conditional asymmetry,
 - 11–12, 34–35
- Conditional heteroskedasticity, 10,
 - 11, 33
- Counterfactuals, 176–177
- Covariance matrix, 12, 34
 - of influence functions, 12–13
- Credit market, 67

- Credit market disruptions and business cycle, 79
 - data, 80–82
 - empirical issues, 80
 - Great Recession, 79–80
 - identification, 84
 - macroeconomic effects of, 91*n*9
 - model selection, 82–83
 - results, 84–90
- Credit shocks, 80
- 'Curse of dimensionality' problem, 42
- Cycle-extraction methods, 115
- Cyclical convergence, 125
- Data generating processes (DGPs), 14, 67
 - DGPs under alternatives, 15
 - and estimation under null, 14
- Debt targeting rule, 159
- Decompositions, 188*n*2
 - comovement, 172–174
- Demand functions, 158
- Deviance Information Criterion (DIC), 83
- Diagonal matrix, 68
- Domestic effects, 58
- Domestic financial intermediaries, 153–155
- Domestic long-term interest rate, 155
- DSGE model, 41, 149–150, 170, 179
 - fit, 158
 - qualitative (un)importance of non-standard features in, 188–189
- Dynamic bivariate model, 21
- Dynamic factor-augmented VAR model, 170
- Econometric framework, 68
 - algorithm, 70–71
 - drawing state vector, 71–72
 - estimation, 69
 - MS2-FAVAR Model, 68–69
 - priors, 72–73
- Economic events, 38
- Economy-specific monetary policy shocks, 57
- Estimation algorithm, 94–97
- Euro Area (EA), 38
 - synchronization of cycles with, 125–128
- European Central Bank (ECB), 38
- European sovereign debt crisis, 56
- European Union (EU), 100
- Exchange rate, 157
- Exports, 160
- External validation, 177–179
- Factor models, 66
- Factor-augmented vector autoregressive model (FAVAR model), 66–67, 68, 80, 170, 186
- Financial crisis, 38, 53
- Financial indicators, 66
- Financial institutions, 2
- Financial intermediaries, 153
- Finite sample performance, 74–79
- First differences (FD), 100
- Fixed-coefficient VARs, 43
- Forecasting exercise, 97–98
- Foreign long-term bonds, 154
- Foreign long-term interest rates, 181*n*2
- Fourth-order multivariate Hermite polynomials, 9
- Frequency domain, 107–109
- Gaussian asymptotic approximation, 13
- Gaussian maximum likelihood estimators, 8–10
- Gibbs sampler estimation procedure, 67, 70
- Global financial crisis (GFC), 101
- Goodness-of-fit, 143
- Government, 159–160
- Great Inflation, 56
- Great Moderation, 21, 38, 41, 54, 56, 58
- Great Recession, 21, 50, 56, 79–80, 90, 188*n*3

- Gross domestic expenditure (GDE), 3
 - bivariate model for GDE–GDI measures, 24
- Gross domestic income (GDI), 3
 - bivariate model for GDE–GDI measures, 24
- Gross domestic product (GDP), 3, 101, 118–122
- Growth cycle, 101, 103, 107, 112–114, 133, 136–137, 140
- Hamilton filter (HF), 100, 138
- Hermite polynomials, 33
- Hessian matrix, 6
- ‘Heterocliticity’, 10
- Heterogeneous switching
 - credit market disruptions and business cycle, 79–90
 - econometric framework, 68–73
 - estimation algorithm, 94–97
 - FAVAR model, 66–67
 - forecasting exercise, 97–98
 - Monte Carlo simulations, 73–79
- High-dimensional factor-augmented VAR models, 66
- Hodrick–Prescott filter (HP filter), 100, 115, 140–142
- Households, 157–159
- Independent Normal-Wishart prior distribution, 72
- Inflation spillover effects, 60
- Inflation-target shock, 173, 188, 188*n*3
- Influence functions, 34
 - covariance matrices of, 12–13
 - interpretation of, 11–12
- Information matrix test, 2–3
 - of multivariate regression model, 3–10
- Interest rates 155–157
 - spillover effects, 59
- Intermediary balance sheet, 153–154
- International long-term interest rate comovement
 - calibrated parameters, 160–161
 - data, 160, 189
 - prior distributions, 161–165
 - domestic financial intermediaries, 153–155
 - estimation, 160
 - exchange rate, 157
 - exports, 160
 - firms, 152–153
 - government, monetary policy and resource constraint, 159–160
 - historical decompositions of USA and UK long-term interest rates, 187–188
 - households, 157–159
 - interest rates and term premia, 155–157
 - long-term interest rate comovement, 148
 - model validation, 168–172
 - parameter estimates, 165–168
 - posterior estimation, 165
 - qualitative (un)importance of non-standard features in DSGE model, 188–189
 - robustness, 179–180
 - SOE, 148–149, 151
 - structural vs. reduced-form analysis, 186–187
 - theoretical model, 151
 - understanding comovement, 172–179
- Intuition, 174
- Joint estimation approach, 52
- Kalman filter, 168
- Kernel function, 44
- Keynesian model, 49
- Labour supply curve, 159
- Lagrange multiplier (LM), 2
- Likelihood
 - framework, 2
 - function, 94–95
 - ratio, 2
- Linear factor models, 66

- Linear FAVAR model, 91*n*9
- Log-likelihood function, 4
- Long-term debt risk premium
 - shock, 172
- Long-term domestic bonds, 154
- Long-term interest rates, 148, 155, 156
 - comovement, 148–149, 168, 179
 - domestic, 155
 - UK, 187
 - US, 187
- Long-term nominal interest rates, 148

- Macroeconomic indicator, 68
- Macroeconomic models, 80
- Macroeconomic variables, 66
- Markov chain Monte Carlo
 - algorithms (MCMC algorithms), 39
- Markov processes, 66
- Markov-switching
 - Bayesian VARs, 67
 - factor loadings, 67
 - parameters, 66
 - variables, 70
- Maximal overlap discrete wavelet transformation approach (MODWT approach), 142
- Metropolis-Hastings sampler, 165
- Model fit and moment estimates, 168–169
- Model validation, 168
 - model fit and moment estimates, 168–169
 - reduced-form models of comovement, 170–172
 - term-premium estimates, 169–170
- Monetary policy, 38, 49, 159–160
 - data and priors, 46
 - empirical application, 46
 - methodology, 42–45
 - reduced-form evidence, 46–53
 - shock analysis, 40–41
 - structural analysis, 57–60
