INDEX

Aggregation model, 131
Amygdala, 158
Analysis of Functional NeuroImages software (AFNI software), 165
Analytic technique, 107
Anterior cingulate cortex (ACC), 156, 158
Anti-psychopathology, 160
Artificial intelligence (AI), 2
Behavioral measures, 77, 81
Bivariate t-tests, 86
Buffering effect, 107
Chi-square tests, 86
Coalitions, 81
Collectivism value theory, 159
Collectivistic values, 160
Confirmation bias, 31–32
Consistency, 57–58
Construction tasks, 149
Cox proportional hazards model, 36–40
Crimes, 35
Crowdsourcing platforms, 6
Culture-gene coevolution theory, 160
Cyberball paradigm, 157, 163
Debriefing, 147
Dilemma tasks, 149
Direct exchange patterns, 56–58
Discussion group studies, 138–139
assessment, 149
camera and VCR issues, 143–147
coding and analysis of data, 147–148
compensating participants, 143
ensuring rigor in face-to-face studies, 142–147
fundamental properties of face-to-face group studies, 141–142
open interaction studies, 140–141
recommendations, 151–152
setting, 143
standardized experimental setting studies, 139–140
technology, 149–151
Distress, 104
Distribution of materials, 146
Dorsolateral prefrontal cortex (dlPFC), 156–157, 160–161
Dual coping mechanisms, 157
Dual process models, 159
Empathy, 3, 8
Endorsement, 81
Evaluation, potency, and activity (EPA), 128
Exchange patterns, 55
design and participants, 59
manipulations, 61–63
measures, 63–64
methods, 59–64
model, 64
patterns of direct exchange, perceptions of predictability and fairness, and group identification, 56–58
power, 53–56
procedures, 60
results, 64–68
Exchange theory, 78
Exclusion, 156
Expectation states, 120
Experiments, 80, 122
Explicit processing, 159
Explicit/conscious neural system, 160–161
Extra-legal information, 25

Face-to-face group studies
 ensuring rigor in, 142–147
 fundamental properties of, 141–142
Face-to-face interaction, 139
Female-on-female crimes (FF crimes), 36, 40
First-order expectations, 120
Fisek-Berger-Moore theory and research (F-B-M theory and research), 120–122
Fisher’s C test statistic, 64–65
Functional Magnetic Resonance Imaging scanner (fMRI scanner), 157, 173
demographic characteristics, 165–166
experiment, 162–165
image acquisition and analysis, 165
ROI results, 169–171
sample, 161–162
social exclusion and neurological distress responses, 157–159
values and neurologically disso-
ciable dual mechanisms, 159–161
whole-brain fMRI results, 166–169

Gender, 2–4, 13, 25
 role congruity theory of, 28–30
roles, 29
Generalized linear models, 86
Glass ceiling, 78–79
Grand Unified Theory, 151–152
Group identification, 56–58

H-statistic, 105
High-power actors, 55–56
Human-AI interaction, 2
 literature, 4–5
Human-AI role-taking, 5–6
 analysis, 8
attention checks, 8
findings, 9–15
methods, 5–8
stimuli, 6–7
variables, 7–8
Human-computer interaction, 4
Human-machine interaction, 4
Ideal victim, 31
Identity
 discrepancy, 104
 theory, 99–100
verification, 100
Implicit processing, 159
Implicit/automatic neural system, 160–161
Inconsistency model, 131–133
Individualism, 159
Individualistic values, 160
Inequality, 120
Insula, 158
Integration of AI into human processes, 13–14
Interaction, 138
Interaction plot, 110–111
Justice evaluations, 52–53
Kaplan-Meier survival functions, 35–36
Legitimacy, 76
 analyses and results, 86–91
challenge to measure, 77–81
design and participants, 83–85
hypotheses, 81–82
processes, 80–81
theoretical development, 77–81
time measures, 85–86
Lighting, 144
Low-power actors, 55–56

Male-on-male crimes (MM crimes), 36, 40
Mental models, 28–29
Modified tit-for-tat strategy, 62–63
Moore’s theory, 121
Morality, 156–157
Multiplex ties, 102–103
Multiplexity, 99, 105–106
contextualizing self-complexity with, 102–103
Multivariate regressions, 107

National Incident-Based Reporting System (NIBRS), 26–27, 33–34
Negatively connected power-imbalanced networks, 54–55
Negotiated exchanges, 55
Negotiation, 52–53
Neuroimaging studies, 158
Neurological distress responses, 157–159
Neurologically dissociable dual mechanisms, 159–161
Non-lethal crime, 42
Nonparametric estimates, 35–36
Normal crime, 25–26, 31
Novel theory, 158–159

Offender-victim dyads, 25–26
data and measures, 33–35
gendered composition, 26
hypothesis development, 30–33
importance, 27–28
measures, 34–35
survival function analysis, 35–40
Open interaction studies, 140–141
Operations, 145

Pairwise Wilcoxon tests of difference, 38
“Paper and pencil” methods, 139
Perceptions of predictability and fairness, 56–58
Performance expectations, 120
Perspective taking, 3, 7
Positive and Negative Affect Schedule (PANAS), 162
Power, 53, 56, 76
in groups and organizations, 78–80
power-dependence theorists, 53–54
power-imbalanced exchange networks, 54–55
Prestige hierarchies, 79
Problem-solving tasks, 149

Qualified perceptions, 13–14

Race, 162
Reciprocal exchanges, 55
Reciprocation, 53
Reciprocity, 52–53
Recording logistics, 146
Region of Interest (ROI), 165 results, 169–171
Regressions test, 107
Rejection of AI’s human capacities, 13–14
Relational approach, 26–27
Reliability, 139–140
Role congruity theory, 26 of gender, 28–30
Role schema, 28–29
Role theory, 29
Role-taking, 2
with AI, 13–15
literature, 2–5
variation, 25

Schemas, 28–29
Seating, 144
Second-order expectations, 120
comparing models, 129–131
empirical comparisons, 125–129
Fisek-Berger-Moore theory and research, 120–122
research, 131–134
study, 120
Troyer-Younts-Kalkhoff theory and research, 122–124
Webster-Whitmeyer-Rashotte theory and research, 125
Self-awareness, 160
Self-complexity, 98–100, 102, 105 benefits, 99
contextualizing self-complexity with multiplexity, 102–103
data, 103
identity theory, 99–100
measures, 104–107
results, 107–111
sample, 103
Self-enhancement, 160
“Self-in-self” model of role-taking, 3
Self-protection, 160
Shipley’s test of direct separation, 64–65
Social cognitive neuroscience, 160–161
Social exclusion, 156–157, 159
Social network analysis, 102
Social neurosciences, 156
Social order, 80
Social psychology, 2
Social roles, 28–29
Sociology of morality, 156–157
Sound recording, 144–145
Source model, 131
Source theory, 121
Standardized experimental setting studies, 139–140
Standardized experimental situation, 138
Status, 76–77, 120, 138
in groups and organizations, 78–80
Stratified Cox model, 38
Structural equation modeling (SEM), 64
Survival function analysis, 35–40
Cox proportional hazards model, 36–40
nonparametric estimates, 35–36
Survival tasks, 149
T-tests, 8
Task, 138, 145
Time to clearance, 24
Troyer-Younts-Kalkhoff theory and research (T-Y-K theory and research), 122–124
Unequal power, 79
Validity, 138
Values, 159–161
Ventromedial prefrontal cortex (vmPFC), 156–157, 160–161
Virtual ball tossing game, 157
Webster-Whitmeyer-Rashotte theory and research (W-W-R theory and research), 125
Whole-brain fMRI results, 166–169
Workplace friendships, 113–114
Zoom, 149–151
