

# INDEX

- ABS ranking scheme, 16
- Advances in Environmental Accounting and Management (AEAM), 6, 22
- Agency theory, 32–33
- Assessment of future risk, 113–114
- Australian Business Dean Council (ABDC), 16
  - A-ranked journals category, 18
  - ranking classification scheme, 18
  - basic panel fixed model, 62
- Binary logistic regression analysis, 44–45
  - corporate governance variables, 45
  - dependent variable, 44
- Block ownership, 54–55
- Board independence, 88
- Board interlocks (*see also* Women board interlocks)
  - CEO interlocks, 86–87
  - control variables, 91–93
  - correlation matrix and multicollinearity, 96
  - data and sample selection, 89–90
  - descriptive statistics, 93
  - empirical results, 93–98
  - hypotheses development, 86–89
  - independent board interlocks, 88
  - main results, 96–98
  - measurement of variables, 90
  - methodology, 89–93
  - model specification, 90–91
  - multiple directorships environment in India, 85
  - resource dependency theory, 84–86
  - sensitivity tests, 98
  - theoretical framework and hypotheses, 85–89
  - total board interlocks, 88–89
- Board size, 52–53, 56–57, 60
- BoardIndependence* (corporate governance control variables), 40
- BoardSize* (corporate governance control variables), 40
- Bombay Stock Exchange (BSE), 5, 89–90
- Breusch–Godfrey Serial Correlation LM Test, 106
- Breusch–Pagan–Godfrey Test, 106
- Brundtland Commission, The, 12
- Business Strategy and the Environment's* GHG publication, 22
- Carbon dioxide (CO<sub>2</sub>), 82, 128
- Carbon Disclosure Leadership Index (CDLI), 52–53
- Carbon Disclosure Project (CDP), 31, 89–90, 108, 110–111
  - disclosures, 109
  - questionnaire, 115–116
  - scores, 116
- Carbon emissions, 5
- Carbon emissions performance (CP), 96–97
  - CEO interlocks, 86–87
  - control variables, 91–93
  - correlation matrix and multicollinearity, 96
  - data and sample selection, 89–90
  - descriptive statistics, 93
  - empirical results, 93–98
  - hypotheses development, 86–89
  - independent board interlocks, 88
  - main results, 96–98
  - measurement of variables, 90
  - methodology, 89–93

- model specification, 90–91
- multiple directorships environment in India, 85
- resource dependency theory, 85–86
- sensitivity tests, 98
- theoretical framework and hypotheses, 85–89
- total board interlocks, 88–89
- women board interlocks, 87–88
- Carbon management accounting (CMA), 14–15
- CEOs' interlocks (CEIL), 98–99
- Chartered Association of Business Schools (ABS), 16
- Chief executive officers (CEOs), 56, 82–83
  - interlocks, 83–84, 86–87
- China
  - binary logistic regression analysis, 44–45
  - control variables, 40–41
  - data collection and methodology, 38–41
  - dependent variable, 39
  - descriptive statistics, 41
  - empirical results, 41–45
  - GHG emissions disclosures in, 29–32
  - government ownership in, 5
  - hypotheses development, 36–38
  - independent variables, 40
  - literature review and hypotheses development, 32–38
  - model specification, 38–39
  - sample selection, 38
  - SOE, 34, 36, 38
  - theoretical framework, 32–34
- China Stock Market & Accounting Research Database (CSMAR), 31
- Chinese Communist Party (CCP), 34–35
- Chinese SOEs, 31, 35–38
- Climate Accountability Institute, 3
- Climate change, 82, 108
  - control measures, 144
- Companies Act, The (2013), 85, 89
- Company-specific control variables, 73
- Conference of Parties (COP), 5–6
- Continuous variables, 118
- Control variables, 40–41, 61, 76, 91, 93, 100–101, 144–145
- Corporate environmental performance (CEP), 14
- Corporate governance
  - correlation of dependent and independent variables, 70
  - dependent variable, 63–69
  - econometric modelling, 60
  - hypothesis development, 56–59
  - independent variables, 70
  - literature review, 55–56
  - measurement of variables, 60–61
  - mechanisms, 54
  - methodology, 59–63
  - multivariate results, 70–73
  - results, 63–73
  - review of prior studies, 56
  - robustness check, 73
  - study design and sample selection, 59–60
  - theoretical foundation, 55
  - variables, 45, 52–53
- Correlation matrix, 96
- Correlation of Dependent and Independent Variables, 70
- Corruption, 144
- Corruption perception index (CPI), 150
- COVID-19 pandemic, 108
- Cyclones, 2–3, 128
- Decision-making process, 34–35
  - in SOE, 34–35
- Dependent variables (*see also* Independent variables), 39, 44, 60, 63, 69, 116
  - correlation of, 70
- Developed countries, 128–129, 132–133, 145–146

- determinants of GHG emissions in, 130
- Developing countries, 128–129, 132–133
  - determinants of GHG emissions in, 130, 145
- Development process, 150
- Droughts, 2–3, 128
- Duality* (corporate governance control variables), 40
- Econometric modelling, 60
- Economic sustainability, 144–145
- Economics-oriented decision-making process, 37
- Emission Industry, 40
- Empirical model, 145–146
- Environmental disclosure, 111
- Environmental Kuznets curve (EKC), 128–129
- Environmental pollution, 144
- Environmental responsibilities, 30–31
- Explanatory research design, 59–60
- Financial slack, 40, 61, 76
- Financial-sector firms, 59–60
- FirmSize*, 40
- Fixed-effects modelling technique, 62
- Full Information Maximum Likelihood (FIML), 97
- Future risk variable, 121
- GenderDiversity* (corporate governance control variables), 40
- Generalised method of moments (GMM), 97–98
- Global Climate Risk Index 2020, 82
- Global Reporting Initiative (GRI), 13
- Global warming, 52
- Greenhouse gas disclosures, 30–32, 60
  - board size and, 56–57
  - correlation of dependent and independent variables, 70
  - dependent variable, 63–69
  - econometric modelling, 60
  - hypothesis development, 56–59
  - independent variables, 70
  - insider ownership and, 59
  - literature review, 55–56
  - measurement of variables, 60–61
  - methodology, 59–63
  - multivariate results, 70–73
  - ownership concentration and, 58–59
  - proportion of non-executive directors and, 57–58
  - results, 63–73
  - review of prior studies, 56
  - robustness check, 73
  - study design and sample selection, 59–60
  - theoretical foundation, 55
- Greenhouse gas emissions, 2, 6, 23, 30, 52, 56–57, 82, 108–109, 128
  - detrimental effect of, 30
  - disclosures, 74–75
  - GHG articles spread by continent, 19
  - GHG articles spread by country, 17–19
  - method and data, 16
  - results, 16–20
  - studies on GHG reporting and disclosure research, 13–16
- Greenhouse gases (GHGs), 2, 12
  - contributions to special issue, 4–6
  - issue, 4
  - literature, 14
  - practices, 12–13
  - reporting initiatives, 12–13
  - studies on GHG reporting and disclosure research, 13–16
- Gross domestic product (GDP), 6, 128
- GDP/CAPITA, 41
- Gulf Cooperation Council, 132
- Hausman's test, 116
- Heckman's regression analysis, 98
- Heteroscedasticity test, 70, 106
- High-income countries, 128–129

- Human-induced actions, 128
- Incentives, 109
- Income groups, 145
- Income status, 128–129
- Independent board interlocks (IBIL), 88, 100
- Independent variables (*see also* Dependent variables), 40, 60, 70
  - correlation of, 70
- India, 82
  - carbon emissions performance in, 5
  - multiple directorships environment in, 85
- Indian Companies Act (2013), 86, 89–90
- Indian public Ltd companies, 87
- Industry variable, 73
- Insider ownership (independent variable), 60, 75–76
  - and GHG disclosures, 59
- Institutional theory, 111, 113
- Intergovernmental Panel on Climate Change (IPCC), 12
- International Financial Reporting Standards (IFRS), 57
