

INDEX

Note: Page numbers followed by “*n*” indicate notes.

- Acidification, 43
- Action plan electric mobility, 78–79
- Active mobility, 162–163
- Activity-based Model (ActBM), 180–181
- Adoption
 - of EVs, influences on, 99
 - theories of technology adoption, 98–99
- Afreecar, 66–67
- Agency model, 65
- Alternative fuel vehicles (AFVs), 103
- Aluminium (Al), 39
- Analytical approaches, 8
- Analytical Hierarchy Process (AHP), 181
- Artificial intelligence (AI), 199
- Automated travel, 129
- Automobile ‘regime’, 233
- Automobility
 - electric automobility, 233
 - electrification of, 4–11
 - gasoline-powered automobility, 23
- Automotive industry, 9, 194
 - distribution model of incumbent, 17–18
 - EU regulations on CO₂ emissions, 57
 - ‘Formula E-team’, 79
 - importance, and inertia of, 16
 - structure and economics of, 54
- Automotive supply chain, 240
- Automotive value chain, 244
- Autonomous vehicle (AV), 212, 227, 242
 - adoption, 213
 - AV-related Statistics, 217
 - questions on AV-related policy, 221
- Back-up electricity supply, 66
- Battery electric vehicles (BEVs), 7, 34–35, 78, 194, 232
 - production, distribution, and retail strategies, 63–65
 - well-to-wheel-efficiency of, 36
- Battery exchange, 166, 204–205
 - systems, 204
- Battery swap (*see* Battery exchange)
- Battery swap station (BSS), 204
- Battery/batteries, 37, 192, 196, 240
 - assembly capacity, 57
 - components, 39–40
 - end-of-life, 65–66
 - management systems, 197
 - packs, 59–62
 - second life applications, 65–66
 - technologies in battery development, 198–202
- Behaviour change, 233
- Behavioural spillover, 108
- Beijing Automotive Industrial Corporation (BAIC), 205
- Better Place concept, 65–66
- BMW i3, 64
- Bosch company, 192
- Business models, 10–11, 192
 - of EV retail, 241
- Business-to-consumer model, 100
- Capacity, 21
- Car
 - car-based motorisation, 10
 - industry, 14–19
 - infrastructure, charging, and land use patterns, 19–21

- Car culture, 16, 244
 - and habits, 21–23
- Car financing schemes, 130
- Car manufacturers, 205
- Car mobility, 84
 - electrification of, 75
 - hegemony of ICE mobility, 75–78
 - surge in full-electric mobility, 80–84
 - surge in plug-in HEV mobility, 78–80
- Car ownership, 243
- Car production, 25, 77
- Car-dependence, 243
- transportation system, 16
- Carbon black, 39
- Carbon case in lifecycle perspective, 36–39
- Carbon emissions, 14, 39, 57, 61, 63, 239
- Carbon fibre reinforced plastic body (CFRP), 64
- Carbon footprint (CF), 36
- Carbon monoxide (CO), 44
- Carbonaceous fuels, 34
- Cell assembly, 61–62
- Cell finishing, 61–62
- Cell manufacturing process, 61
- ‘Cell-to-pack’ technology, 57, 61
- Ceramic electrolytes, 200
- Charger network coverage, 139
- Charging behaviours, 122
- Charging source of electricity, 37
- Charging etiquette, 240
- Charging infrastructure, 19–21
- Charging points, 142, 162, 171, 179, 181–182, 195–197, 204–206, 240
- Charging process, 195, 201
- Charging stations, 163
 - charging process, 165–166
 - charging speed, 166–167
 - energy source, 164–165
 - methodology for location of charging stations, 176
 - power flow direction, 167–168
 - technology for, 163
 - type, 165
- Charging technologies, 10
- Chinese EV market, 205
- Circular economy concept, 235
- Clean vehicle technologies, 194
- Climate change, 4, 14, 40, 103
- Co-dynamics of car drivers and manufacturers, 85–87
- CO₂ emissions, 40
- ‘Cocooning’ function of automobile, 22
- Communication channels, 98
- Comprehensive ReCiPe evaluation scheme, 42
- Congestion pricing scheme, 213
- Connected and autonomous vehicles (CAV), 213
- Construction costs, 173
- Contactless charging method (*see* Wireless charging method)
- Conventional batteries, 200
- COP26 Declaration, 232
- Copper (Cu), 39
- Costs, 173
 - economic-financial criteria, 174
 - and leasing options, 99–100
 - of ownership, 121
 - types of, 179
- COVID-19 pandemic, 194
