  eco-costs, 158
  environmental assessment and, 157–158
  IO, 157
  LCA, 157
  MFA, 157
Action Design Research (ADR), 3, 177
Adam optimization, 180
Additive manufacturing, 13
Advanced manufacturing, 1, 6, 8
Advanced robotics, 9
Agent-based modelling (ABM), 155–156
Ambidexterity, 52
  best practices for ambidextrous organization, 54–57
  'BMW' as example of sequential ambidexterity, 56–57
  challenges for HRM, 57–59
  HR practices, 59–63
  'Munich Re' as example of structural ambidexterity, 55
  'Trumpf' as example of contextual ambidexterity, 55–56
Ambiguity, 5–6
Ancient Greek Philosophy, 38–40
Ancients freedoms, 44
ANOVA, 114, 116–117
  multiple hierarchical regression analysis, 116–117
Artificial intelligence (AI), 2, 9, 20, 54–56, 106, 152
  and advantages and disadvantages, 21–23
  benefits, 22
  in business-to-business relationships, 20–21
  contributions to social value of, 27–30
  ethical considerations arising from digital technologies, 21
  incubator ecosystems, 27
  and post-Covid-19 recovery, 19–21
  and related technologies, 21–22
  risks, 22–23
  social value of, 20, 23
  stakeholders in B2B, 23–27
Assessment, 154
Augmented reality (AR), 13–14
Ausbildung, 38
Automation, 52, 57–58
Autonomous mobile vehicles (AMV), 12–13
'Autonomous' systems, 12

B-Scans, 173–174, 177, 179
Big data, 22, 51–52
  analytics, 9
Bildung Ideal, 38–40
  governmental misuse of, 42–43
Biomimicry analysis, 157–158
Blanqui, inventor of term 'Industrial Revolution', 40–41
Blockchain technology, 9, 22, 152
'BMW' as example of sequential ambidexterity, 56–57
Boston Consulting Group, 36–38
Brokerage process, 154
Business customers, 25–26
  AI creates value for and, 28–29
Business ethics, 21
Business value, 182, 185
Business-to-business (B2B), 20–21
  AI in, 20–21
  efficiency gains in B2B exchanges, 28
  stakeholders in, 23–27

CAD4COVID software, 20
California privacy law, 22–23
Capability-building processes, 56–57
Capability-shifting processes, 56–57
Carbon emissions, 152
Cargo, 70
Categorical cross-entropy loss, 180
Central Product Classification (CPC), 159–160

Circular business, 152
Circular economy (CE), 2–3, 152
Circularly integration, 175
Civilization, 39
Cloud computing, 9, 22
Cognitive proximity, 129
Collaboration, 128–130
Collaborative HR systems, 110–111, 113
Collaborative robot (cobot), 106
  in smart industry, 107
Collective learning process, 154
Competitors, 26
Computer anxiety, 109, 112
Confirmatory factor analysis (CFA), 114
Connectivity, 1
Consistencies, 114–115
Consolidating less-than-truckload (LTL), 71–72
Contextual ambidexterity, 54–55
  'Trumpf' as example of, 55–56
Continuous Professional Development (CPD), 59
Control variables, 113
Convolutional neural networks (CNNs), 3, 177
  architecture, 178–179
'Coopetition' business model, 158
Coordination, 154
Corporate Digital Responsibility (CDR), 21
Correlations, 114–115
Cost-benefit approach, 2, 30–31
Covid-19 pandemic, 25
Critical infrastructures, 171–172
Cross-case analysis, 138–142
Cross-docking, 2, 70
  Bibliometric network concerning Industry 4. 0, 95
  characteristics, 84–86
  characteristics and Industry 4. 0 adoption, 89–90
  extended search on Industry 4. 0 in cross-docking, 94, 97, 100
  frequency per cross-docking characteristics, 91
  frequency per performance measure setting, 92
  gaps and future research directions for Industry 4. 0 in cross-docking, 98–100
  general overview of cross-docking literature, 79
  inclusion and exclusion criteria, 77–78
  Industry 4. 0 components in cross-docking literature, 94–98
  Industry 4. 0 components in manufacturing and logistics, 75–76
  in Industry 4. 0 era, 71–76
  methodology, 76–78
  operational problems, 86–89
  performance indicators, 86, 90, 94
  performance measures in, 87–88
  research and industry practice, 72–75
  results, 78–86
  scope and review questions, 76
  search terms, 76–77
  solution methods and Industry 4. 0 adoption in cross-docking literature, 80–84
Customer engagement, 29
Customer lifetime value (CLV), 25
Customer relationship management (CRM), 29
  improved customer relationship management and customer engagement, 29
Customized smart products and services, 28–29
Cyber physical systems, 1, 9, 51–52, 75–76
Cybersecurity solutions, 9

Data pre-processing
  GprMax simulations, 179
  MI performance, 180
Data Pro Code, 27
Data usage, 11–12
Decision-support framework for IS, 153
Decision-support tools
  industrial symbiosis development, 153–154
  industrial symbiosis support framework, 161–165
  techniques and methodologies for industrial symbiosis development, 155–161

Deep learning (DL), 22, 176
Descriptive statistics, 114–115
Development, 43–44
  in cross-docking systems, 70
Digital age, 54
Digital currency, 13–14
Digital models, 13–14
Digital technologies, 19–20, 22
  ethical considerations arising from, 21
Digital twins, 14
Digitalization, 54
  of business process, 51–52
Digitization, 1
Dimensions of proximity, 140
Discontinuation, 154

  suppliers and supply chain partners, 25–26

Facilitators, 154
Factories of the Future, 6
Finite-difference time-domain method (FDTD method), 179
Firm-related outcomes of AI adoption, 27–28
  AI creates value for business customers and supply chain partners, 28–29
  AI creates value for societal stakeholders, 29–30
  improved health and well-being, 30
  improving work quality and employee engagement, 28
  increased operational productivity and process efficiency, 27
  informed decision-making, 28
  innovation and diversification, 28
  new opportunities in labour market, 30
  reduced environmental impact, 30
First industrial revolution
  Blanqui, inventor of term 'Industrial Revolution', 40–41
  concept of liberty and personality education, 43–44

criticism on governmental misuse of Bildung ideal, 42–43
educational insights from, 38–45
liberalism and two conceptions of liberty, 44–45
Scotland, 41–42
soft skills education in, 36–38
Von Humboldt and Bildung Ideal, 38–40
Food industry, 152
Foundational technology
foundation technology-oriented smart industry initiatives, 145
foundational technology-focused initiatives, 139–142
foundational technology-focused projects, 142
smart industry project focused on, 136–138
Fourth industrial revolution (Industry 4. 0), 1, 5–7, 36, 51–52, 71
components in manufacturing and logistics, 75–76
cross-docking characteristics and Industry 4. 0 adoption, 89–90
cross-docking in, 71–76
educational insights from first industrial revolution, 38–45
freedom crucial for personal development, 45–46
intelligence amplification, 174–176
paradigm, 153
soft skills education in first industrial revolution lesson for, 36–38
solution methods and Industry 4. 0 adoption in cross-docking literature, 80–84
Freedom crucial for personal development, 45–46
Front-end technologies, business impact through, 175
